Sub : DMIDM

CODE : CSA1610

CO2 - AT2

CLASS TEST

1. a,

Data Mining : Finding useful patterns from Data Set large

Two Tasks : Classification
clustering

*KDD : cleaning → Integration → Selection → Tranelformation → Mining → evaluation → Presentation.

Preprocessing : Improves Data quality.

b, • Data cleaning - Remove Errors
• Issues - Missing values
• Missing value - Mean or Delete
• Noisy Data - Binning or smoothing

2. a, Data Integration - Combines data from many sources

challenges are redundancy, inconsistency

Solution : Removes duplicates & Standardize data

b, Covariance : Shows relationship between variables

Forms : Positive negative

Equal-frequency (equi-Depth) binning:

Divides data into bins with an equal no. of values to reducenoise.

Data Discretization:

converts continuous Data into intervals

⇒Importance:

Reduces complexity and improves analysis

⇒Equal width binning:

Equal interval Size.

⇒Equal frequency binning:

Equal no. of Data items in each bin.
